Scott Morris

347-339-5695 · Brooklyn, NY · smorri933@gmail.com · linkedin.com/in/scottdmorris · github.com/scottdmorris

SUMMARY

AI-integrated software engineer and data professional with experience building Python automation, ETL pipelines, CRM systems, and analytics platforms. Skilled in LLM API integration (OpenAI, Claude), AI-assisted development, and translating business requirements into data-driven technical solutions. Open to software engineering, AI automation, data engineering, and data analyst roles.

SKILLS

Languages & Querying: Python, SQL, JavaScript, Java, HTML/CSS
AI & Machine Learning: OpenAI API, Claude API, Claude Code, Prompt Engineering, TensorFlow, Keras, AI Automation
Data & Analytics: Pandas, NumPy, Matplotlib, GeoPandas, ETL Pipelines, Data Visualization, Tableau, Looker Studio, Excel, QGIS
Tools & Platforms: HubSpot, Salesforce, Jobber, Mailchimp, Figma, Git, Jupyter, React

PROFESSIONAL EXPERIENCE

Luften — Brooklyn, NY November 2025–Present
Data & AI Analyst

- Built and deployed an internal sales dashboard integrating Shopify, Faire, and Jobber APIs across three brands using Python, Claude Code, and GitHub Actions, hosted on Netlify.
- Managed and iterated on luften.net and additional web projects using Lovable for AI-assisted front-end development.
- Analyzed billing and revenue data to identify growth trends and inform business decisions during a period of sustained month-over-month revenue growth.
- Architected HubSpot CRM from scratch — designing data model, multi-stage sales pipeline, and account management workflows supporting 471 recurring commercial accounts and $700K+ in tracked revenue.
- Built recurring cross-brand sales reports in Excel tracking weekly performance across Luften, Frave Home, and SCENT NY, surfacing trends and anomalies for leadership review.
- Built and embedded HubSpot lead capture forms on luften.net and integrated them into email campaigns, contributing to pipeline growth and 100+ net-new client acquisitions since November 2025.
- Oversee monthly technician routing and scheduling across NYC/NJ/PA, delegating ground-level dispatch to a direct report while managing exceptions and adjustments.

Research Foundation of CUNY — New York, NY March 2024–May 2025
Data Program Administrator

- Conducted geospatial analysis in Python (Pandas, GeoPandas, QGIS) to identify transportation and demographic trends across NY/NJ; produced visualizations with Matplotlib for research stakeholders.
- Administered Microsoft SQL Server infrastructure, improving query performance and database accessibility across the research team.

Magna Technology Group — New York, NY June 2023–August 2023
Backend Developer

- Engineered Python ETL pipelines processing 1M+ records, reducing runtime by 80% and enabling near real-time analytics for downstream reporting.
- Built Salesforce automations using Apex and Flow Builder, increasing lead conversion by 25% and improving CRM data accuracy.

Freelance — New York, NY May 2022–Present
Web Developer

- Automated client reporting workflows with Python dashboards, reducing manual reporting work by 70%.

PROJECTS

Internal Sales Dashboard (Luften/Frave Home/SCENT NY) Built a deployed analytics dashboard using Python and Claude Code, integrating Shopify, Faire, and Jobber APIs with automated weekly data refreshes via GitHub Actions on Netlify.
AI Fairness Analysis for Facial Recognition Models Trained CNNs in TensorFlow/Keras on the FairFace dataset to detect and quantify racial bias; evaluated model performance across demographic groups and visualized disparities using Matplotlib and Sklearn.
Predictive Vehicle Pricing Model Built regression and decision tree models on Ford vehicle data achieving 98% price-prediction accuracy; visualized results with Matplotlib and Seaborn.

EDUCATION

Occidental College — B.A. Computer Science · Minors: Cognitive Science, Media Arts & Culture 2022
